# designfire

We took on the challenging task and went beyond all the established boundaries to design fire like never before. It was difficult but we managed to develop solutions that allowed us to arrange natural fire in spaces you would not imagine, be it indoor or outdoor.

As the only company in the world we give you fully automatic fireplaces that guarantee convenience and safety. We carefully listen to our clients giving individually customized products. Our offer covers unique bioethanol and gas technologies that provide a lot of freedom in designing your perfect space with fire as the focal point.

The recognition says it all. Planika is global. With official subsidiaries in Europe, USA and Asia and an extensive distribution network we are present in over 100 countries around the world. But the success also lies in the concept of teal organization that Planika adopted. At the company there is no hierarchy and all the employees manage themselves to have freedom and a real influence on the products we create.

This made it possible to give you truly unique solutions in fire design.  
This is the work of us all.

- Planika

# Automatic Ethanol Fireplaces

## Your Safety Comes First

Thanks to the development of ethanol fireplaces, we can now enjoy the real fire even in apartments without ventilation systems. When bio-ethanol fireplaces were first introduced to the market, only manual devices were available. These weren't much more than metal containers manually filled with bio-ethanol and ignited with a lighter. The construction used little or no technology and posed serious threats of spillage or fire explosion.

### Drawbacks of Manual Bio-ethanol Fireplaces

The manual bio-ethanol fireplaces soon gained a bad reputation for being too dangerous. The fuel residues burning at the bottom of the fireplace produce a flame that is practically invisible to the human eye. The majority of accidents happen when fuel is added to what seems to be an extinguished fireplace, causing sudden blasts of fire and burns.

### The Automatic Fire

Thanks to the technological advancement and the introduction of automatic bio-ethanol fireplaces, we are no longer limited to unsafe manual devices.

The automatic BEV<sup>®</sup> technology means that there is no direct contact between the fire and fuel. The ethanol is contained in a separate reservoir inside the fireplace from where it is transported into the vapour accelerator. Warm ethanol evaporates through a perforated burner and is ignited by a filament. The burning process takes place above the burner and guarantees that the flame has unlimited access to oxygen and is fully combusted. This prevents the smell that is typical for manual bio-ethanol fireplaces. The BEV<sup>®</sup> technology can rapidly extinguish the flame by closing the vapour release.

Planika introduced electronic remote controllers and developed apps and integrated Smart Home System modules that give you full control over the fireplace, i.e. starting and extinguishing the fire or even regulating the flame height. All of this without getting up from your comfy sofa!

Another benefit is a pump that delivers the necessary amount of bio-ethanol and automatically stops when the reservoir is full. Such a feature guarantees that you will never spill the fuel again! Also, the system won't add fuel when the fireplace is still working or cooling.

### But Is It Automatic?

Some bio-ethanol fireplaces are wrongly named automatic, since most of them are not much different from manual ones. Adding a spark ignitor or a peristaltic pump does not automate the combustion process. Once hot, they pose the same threats as the manual bio-ethanol fireplaces. To distinguish between the two types, remember that the true automatic fireplace produces flames by burning ethanol vapours.

### Automatic Fire Opens New Possibilities

Although the automatic BEV<sup>®</sup> fire is a relatively new invention, it has already become popular amongst architects and interior designers. If you are considering buying a fireplace and don't want to modify your house or apartment, the automatic BEV<sup>®</sup> bio-ethanol fireplace seems to be the only option that meets even the most demanding health and safety requirements.

### Key Differences Between Manual and Automatic BEV<sup>®</sup> Devices

Non-automatic fireplaces consist of a metal container that is manually filled with bio-ethanol and ignited with a lighter. The construction is extremely simple and poses some serious threats, such as fuel spillage, burns and fire explosions.

Automatic BEV<sup>®</sup> technology guarantees complete separation of the fuel tank and fire. This, coupled with multiple sensors, meets even the most robust safety requirements.

## Electric fireplace

### REFLEX TECHNOLOGY

a system of prisms and LED lights that provides more visual depth than a regular 2-dimensional fireplace. The warm-coloured mirror installed on the back wall enlarges the flame giving you a more natural experience.

### CONTROL OPTIONS

INCLUDED INCLUDED

### YOU DESIGN!

Enjoy the three-sided panoramic flame or cover the sides of Astro with the included panels. By framing the fire you get three additional arrangement options.

### HEATFLOW SYSTEM

Astro not only decorates but also warms up your home. Take advantage of the 2-stage heater to enjoy cosy winter evenings.

### MULTIZONE COLORFLOW

The Multizone Colorflow let's you give Astro your own look. There are three lighting zones, each with individual colour settings.

### OPTIONAL CASING
